

mxHero

Intelligent capture & filing
of email into cloud storage

Two Core Value Propositions

1 **Save** Email in Cloud Storage *messages & attachments*

- Manage critical communications
- Ease discovery across teams
- Intelligent, content based auto-filing
- Preserve key email from deletion policy
- Help ensure compliance (e.g. HIPAA)
- Better substitute for DMS systems
- Replace legacy email archives

2 **Secure** Email in Cloud Storage *messages & attachments*

- Secure email communications (*sent/received*)
- Transparent: no end user action required
- No recipient software needed
- Help ensure compliance (e.g. HIPAA)
- Audit, revoke, and track files sent over email
- Protect against viruses/phishing attacks
- Automatic attachment version control

Why?

How?

Save Email in Cloud Storage

user email drag & drop

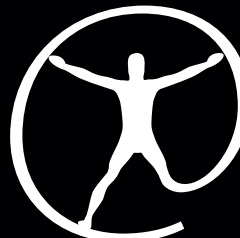

automatic email harvesting
(user accounts, archives)

rerouting shared addresses
(e.g. *invoices@company.com*)

MFP scan2email

search optimization,
metadata assignment
security setting in cloud storage

intelligent capture &
automatic filing
of email into cloud folders

Secure Email in Cloud Storage

Centrally controlled
bi-directional replacement
of attachments with
secure cloud links

- Password access
- Timed expiration
- Encrypted delivery
- Read-only
- Watermarks ... etc.

No change to how email is sent
No user training or software installation
Enable sending of 25 MB+ emails

URL

Secure & compliant delivery
Encrypted, Tracked, Revocable

mxHero Compatibility

Every major email system: O365, Gsuite, Exchange
Every user device: laptop, mobile, etc.

Cloud storage: Box, OneDrive, Egnyte, Google Drive

Deployment

Typically one hour for Company-wide deployments
No end user requirements for minimal change management
